

DIGITAL QHSE TRAINING IN OFFSHORE WIND

WE KNOW QHSE

With over 25 years of experience in crafting digital solutions within the QHSE domain, Cadpeople holds a proven track record. We have worked with some of the most prominent players in the area, and our solutions are used for business-critical training at wind sites all over the world.

HOW CAN WE HELP YOU?

Seeking comprehensive QHSE training for your wind site staff? We're your go-to experts. We've consistently provided QHSE training for wind sites and are intimately acquainted with the specific challenges you encounter. Using our innovative visual communication approach, we've visually conveyed and tackled these complexities, time after time.

We understand your needs, know how to acquire the necessary information, and are

adept at crafting and executing the plan. This means you won't need to start from scratch and attempt to piece everything together; we've already got it sorted.

We fully grasp the nuances of the wind industry, the training essentials, and are ready with a tailor-made solution that can be seamlessly integrated.

Tailor-made solutions

INDUCTION TRAINING

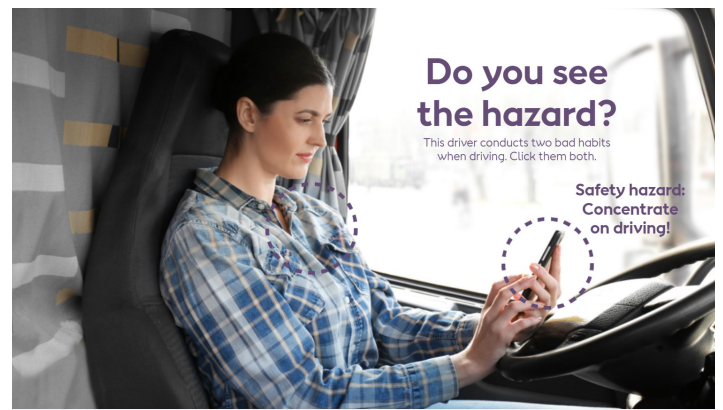

Companies are recognising the power of personalised digital induction. Our platform and learning modules minimise employee downtime, allowing training at one's convenience and ensuring that all employees, whether internal or external, are certified before setting foot on a new site. The digital approach leads to substantial savings, eliminating the need for physical attendance at induction sessions. From any location, employees can undergo their inductions, which translates to reduced travel expenses and time.

We help you standardise the delivery of vital information to offshore service personnel, irrespective of their location or language proficiency. Additionally, we offer real-time progress tracking and effortless content updates.

Prioritising safety, we help you ensure that technicians are updated and certified, promoting a safer working environment for all.

REGULATORY STANDARDS TRAINING

The wind energy sector, like many industries, is governed by a set of regulatory standards that are constantly evolving. Standards that change from country to country. Keeping abreast of these changes is vital for businesses to avoid breaches and penalties.

By investing in training in regulatory standards, organisations can mitigate risks, uphold their reputation, and foster an informed workforce that operates within the bounds of regulatory requirements. We have for instance created environmental compliance training for Ørsted's first offshore wind farm in the rapidly emerging North American market.

Educate employees about the latest regulations specific to the wind energy sector.

Utilise visual aids to present and simplify the interpretation of these intricate regulations.

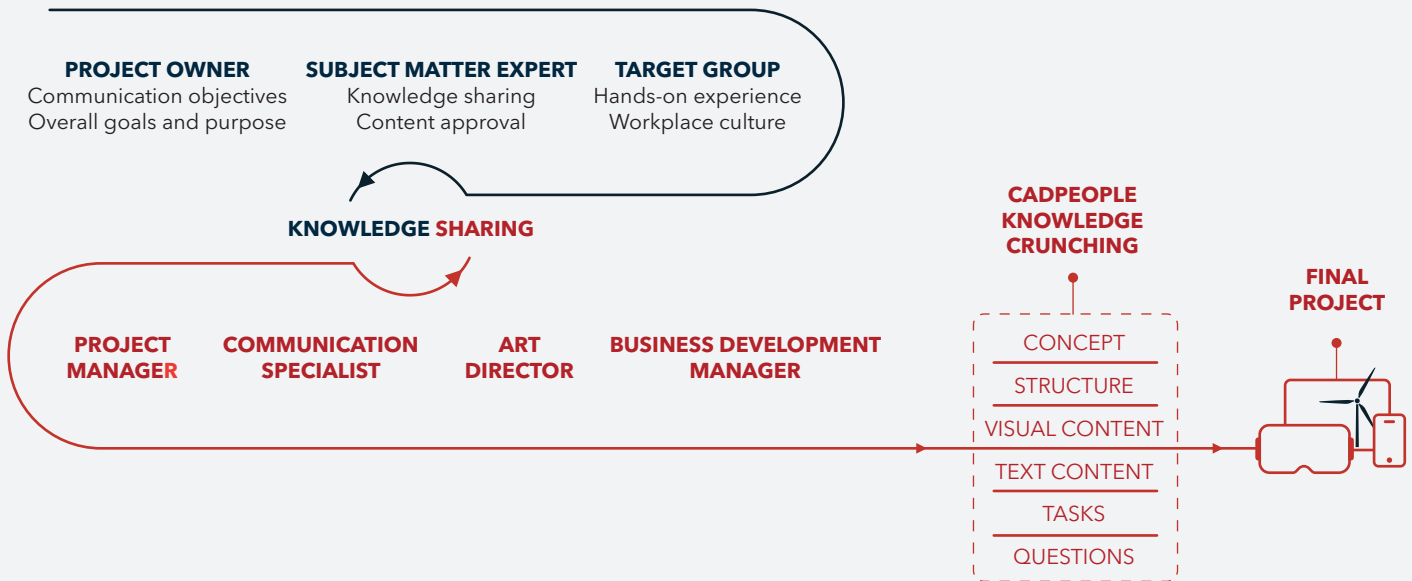

Ensure consistent understanding and application of these regulations across your organisation.

WE MAKE THE COMPLEX SIMPLE

Because of our extensive experience in the field, we know how to gather information from the correct and relevant subject matter experts as well as how to condense that knowledge.

We master the art of making the complex simple and making the learning better and more effective than it was before.

LET'S CHART THE COURSE TOGETHER

Your success in the wind sector is all about equipping your teams with the best tools and knowledge available. With our extensive experience and unparalleled understanding of the industry, we stand ready to elevate your operations and ensure your staff has the knowledge required.

Take the next step in securing a safer and more compliant future for your wind site.
